Most of Earth's history is very sketchily recorded, and the rock record for most of Earth's history is composed of rocks that have been changed physically and chemically many times since it was first laid down. The appearance of fossils in the rock record has made geologic investigation easier, because the organisms that the fossils came from ...

What is the Rock Record?

Time Stands Still. Sealed in darkness for 49 million years, this beetle still shimmers with the same metallic hues that once helped it hide among ancient plants. This rare fossil was found in Messel, Germany. In the same rock formation, scientists have found fossilized crocodiles, bats, birds, and frogs.

The Rock and Fossil Record

In spite of all of the interest in dinosaurs, they form only a small fraction of the millions of species that live and have lived on Earth. The great bulk of the fossil record is dominated by fossils of animals with shells and microscopic remains of plants and animals, and these remains are widespread in sedimentary rocks.

Fossils, Rocks, and Time: Fossils and Rocks - USGS

The Order of the Fossil Record. The fossil record is still believed to be “exhibit A” for evolution. Most geologists insist the sedimentary rock layers were deposited gradually over vast eons of time. In reality, it can only be dogmatically asserted that the fossil record is the record of the order in which animals and plants were buried and fossilized.

Fossil Record | Answers in Genesis

The Law of Fossil Succession is very important to geologists who need to know the ages of the rocks they are studying. The fossils present in a rock exposure or in a core hole can be used to determine the ages of rocks very precisely. Detailed studies of many rocks from many places reveal that some fossils have a short, well-known time of ...

Fossils, Rocks, and Time: Fossil Succession - USGS

The arrangement of fossils within rock layers and across the world is highly ordered, and transitional fossils are abundant. While fossil evidence alone does not prove that all life forms are related by common ancestry, the fossil record is consistent with (and highly suggestive of) that conclusion.
