Vision Physiology Introduction

this lab exercise, we will examine aspects of two of the special senses—vision and hearing. We will also examine how different sensory inputs contribute to a person's ability to orient themselves in their surroundings. Vision The eyes consist of structures that are designed to refract (bend) light from objects in a person's surroundings.

Lab #8: The Special Senses: Hearing, Vision, and Orientation

Furthermore, some programs are based on ideas that don't quite square with the anatomy and physiology of vision. Practiced faithfully, eye exercises may actually help delay the need for glasses or contacts in some people. But you don't need to buy a special program of exercises or follow prescribed visual gymnastics to accomplish these things.
