Then, students engage in a reading exploration activity that defines the components of Coulomb's Law and how it is applicable to interacting charges. The lesson closes with students using Coulomb's Law to calculate forces, charge distance, or charge magnitude with some collaborative problem solving.

A tripling of the separation distance between two point charges results in an electric force which is one-sixth of the original value. Answer: DEF. a. Electric force is a non-contact force (or field force); it can act over separation distances even when the objects do not touch. b. An electrical attraction can even occur between a charged ...

**Static Electricity Review - Answers**

An electric current is a flow of electric charge, carried by negatively charged electrons in atoms of metals. Electrons are free to move and flow in a direction opposite to the conventional current. Cells and batteries supply direct current (DC), which flows only in one direction. Generators produce alternating current (AC), in which the electrons change direction many times in a second.
