Fibromyalgia is currently understood to be a disorder of central pain processing or a syndrome of central sensitivity. Clauw describes the syndrome as a diffuse problem of sensory “volume control” such that patients have a lower threshold of pain and of other stimuli, such as heat, noise, and strong odors.

Fibromyalgia: Practice Essentials, Background, Pathophysiology

Major depressive disorder has significant potential morbidity and mortality, contributing to suicide (see the image below), incidence and adverse outcomes of medical illness, disruption in interpersonal relationships, substance abuse, and lost work time. With appropriate treatment, 70-80% of individuals with major depressive disorder can achi...

Depression: Practice Essentials, Background, Pathophysiology

Negative feedback (or balancing feedback) occurs when some function of the output of a system, process, or mechanism is fed back in a manner that tends to reduce the fluctuations in the output, whether caused by changes in the input or by other disturbances.. Whereas positive feedback tends to lead to instability via exponential growth, oscillation or chaotic behavior, negative feedback ...

Ehlers-Danlos syndromes (EDS) are a group of inherited connective tissue disorders caused by abnormalities in the structure, production, and/or processing of collagen. The new classification, from 2017, includes 13 subtypes of EDS. Although other forms of the condition may exist, they are extremely rare and are not well-characterized. The signs and symptoms of EDS vary by type and range from ...

Between 10 and 15 percent of couples will experience infertility. This means they will not conceive after at least one year of trying. Of these infertile couples, approximately one-third will discover fertility problems on the woman's side, another third will find the problem on the man's side, and the rest will find problems on both sides or receive a diagnosis of unexplained infertility.

Human chorionic gonadotropin (hCG) is a hormone produced by the placenta of a pregnant woman. Early in pregnancy, the level of hCG increases in the blood and is eliminated in the urine. A pregnancy test detects hCG in the blood or urine and confirms or rules out pregnancy. During the early weeks of pregnancy, hCG is important in maintaining function of the corpus luteum.
