History. Past thought on genetic factors influencing aggression tended to seek answers from chromosomal abnormalities. [citation needed] Specifically, four decades ago, the XYY genotype was (erroneously) believed by many to be correlated with aggression. In 1965 and 1966, researchers at the MRC Clinical & Population Cytogenetics Research Unit led by Dr. Court Brown at Western General Hospital ...

Perhaps it is harmless, in everyday thinking, to equate the brain with "gray matter." But if you want to know how brain changes affect behavior, or what causes brain disorders from Alzheimer's disease to multiple sclerosis, focusing on only part of the brain is risky. Until recently, neuroscience has given short shrift to the half of the brain that is not gray but white matter.

Evolution is change in the heritable characteristics of biological populations over successive generations. These characteristics are the expressions of genes that are passed on from parent to offspring during reproduction. Different characteristics tend to exist within any given population as a result of mutation, genetic recombination and other sources of genetic variation.
