The main source of information about celestial bodies and other objects is visible light, or more generally electromagnetic radiation. Observational astronomy may be categorized according to the corresponding region of the electromagnetic spectrum on which the observations are made. Some parts of the spectrum can be observed from the Earth's surface, while other parts are only observable from ...

### **Astronomy - Wikipedia**

A set of primary colors is, most tangibly, a set of real colorants or colored lights that can be combined in varying amounts to produce a gamut of colors. This is the essential method used in applications that are intended to elicit the perception of diverse sets of color, e.g. electronic displays, color printing, and paintings.

Because the pan itself becomes magnetized, a small amount of current (also called electromagnetic frequency, electromagnetic radiation, or EMF, or simply radiation) passes from the cookware into your body when you touch the pan. This is one of the reasons some people are wary of induction technology, more so than of standard electric ranges (which emit only the standard radiation of all other ...

While redshift can be used to tell us about the recession velocity of (non relativistic) galaxies, we also need to find a way to measure the distance to these galaxies. Astronomers have two main methods to measure these distances; parallax (more parallax here) and cepheid variable stars - there's a Khan Academy video on cepheid variable stars.
