Maxwell's equations are a set of coupled partial differential equations that, together with the Lorentz force law, form the foundation of classical electromagnetism, classical optics, and electric circuits. The equations provide a mathematical model for electric, optical, and radio technologies, such as power generation, electric motors, wireless communication, lenses, radar etc. Maxwell's ...

A system of polynomial equations (sometimes simply a polynomial system) is a set of simultaneous equations $f_1 = 0, \dots, f_h = 0$ where the f_i are polynomials in several variables, say x_1, \dots, x_n , over some field k . A solution of a polynomial system is a set of values for the x_i s which belong to some algebraically closed field extension K of k , and make all equations true.

In this section we solve linear first order differential equations, i.e. differential equations in the form $y' + p(t)y = g(t)$. We give an in depth overview of the process used to solve this type of differential equation as well as a derivation of the formula needed for the integrating factor used in the solution process.

"In Module 4, students use similar triangles learned in Module 3 to explain why the slope of a line is well-defined. Students learn the connection between proportional relationships, lines, and linear equations as they develop ways to represent a line by different equations ($y = mx + b$, $y - y_1 = m$, etc.). They analyze and solve linear equations and pairs of simultaneous linear equations.

The solution is not ordinarily obtained by computing the inverse of 7, that is $7^{-1} = 0.142857...$, and then multiplying 7^{-1} by 21. This would be more work and, if 7^{-1} is represented to a finite number of digits, less accurate. Similar considerations apply to sets of linear equations with more than one unknown; MATLAB® solves such equations without computing the inverse of the matrix.

A partial differential equation (or briefly a PDE) is a mathematical equation that involves two or more independent variables, an unknown function (dependent on those variables), and partial derivatives of the unknown function with respect to the independent variables. The order of a partial differential equation is the order of the highest derivative involved.
