Video created by Stanford University for the course "Cryptography I". Week 1. This week's topic is an overview of what cryptography is about as well as our first example ciphers. You will learn about pseudo-randomness and how to use it for ...

Discrete Probability (Crash Course) - Course overview and ...

Probability is a measure quantifying the likelihood that events will occur. See glossary of probability and statistics. Probability quantifies as a number between 0 and 1, where, loosely speaking, 0 indicates impossibility and 1 indicates certainty. The higher the probability of an event, the more likely it is that the event will occur.

Mariners vs. Athletics - Game Summary - March 20, 2019 - ESPN

In probability theory, conditional probability is a measure of the probability of an event (some particular situation occurring) given that another event has occurred. If the event of interest is A and the event B is known or assumed to have occurred, "the conditional probability of A given B", or "the probability of A under the condition B", is usually written as $P(A | B)$, or sometimes $P_B(A \dots$
