Fibroblasts are the most common resident cells in ordinary connective tissue. Fibroblasts are responsible for secreting collagen and other elements of the extracellular matrix of connective tissue.. In microscopic appearance, fibroblasts lack obvious specialized features. And fibroblasts throughout the body all appear similar to one another, wherever they occur in ordinary connective tissues.

Albert's AP® Psychology practice questions will help you review everything from the history of psychology to the inner workings of the mind.

AP Psychology | Practice Questions | Albert

Experimental methods are those in which the researcher controls and manipulates the variables of interests and takes measures of the results. This is the most scientific form of research, but experimental research can be difficult when studying aspects of personality such as motivations, emotions, and drives. These ideas are internal, abstract, and can be difficult to measure.

Theories and Terminology of Personality Psychology

About the Awards NIDA's Avenir Awards provide grants to early stage investigators who propose highly innovative studies. "Avenir" is the French word for "future", and these awards represent NIDA's commitment to supporting researchers who represent the future of addiction science. Awardees receive up to \$300,000 per year for five years to support their projects.
