Electrostatic shielding is the phenomenon that is observed when a Faraday cage operates to block the effects of an electric field. Such a cage can block the effects of an external field on its internal contents or the effects of an internal field on outside environment. Practical use - during sitting in a car or house in a safe.

Electrostatics is a branch of physics that studies electric charges at rest.. Since classical physics, it has been known that some materials such as amber attract lightweight particles after rubbing. The Greek word for amber, ἤλεκτρον, or electron, was the source of the word 'electricity'. Electrostatic phenomena arise from the forces that electric charges exert on each other.
