With exponential decay, the number that leave the population during each period of time is constant. With exponential decay, the percent that leave is constant over time. When exponential decay happens, the graph of the curve will appear to be steeper at first and flatten out over time. Question 13 13.

Exponential Growth/Decay. Many quantities in the world can be modeled (at least for a short time) by the exponential growth/decay equation. A population of bacteria initially has 250 present and in 5 days there will be 1600 bacteria present. Determine the exponential growth equation for this population.

Whenever you see the phrase relative growth rate, continuous growth rate, or exponential growth rate, you know you're dealing with exponential behavior. As discussed in Exponential Growth and Decay: Introduction, all exponential growth/decay problems can be modeled using  $P(t) = P_0 e^{rt}$ , where  $P_0$  is the initial amount,  $r$  is the growth or decay rate, and  $t$  is time.
