"An OS has one queue for both System.err and System.out."That's a very general and not necessarily accurate statement. On what basis do you make that statement? [Citation needed] In a console application (such as cmd or terminal), both streams ("queues" as this answer calls them) appear to be merged (because they show in the same terminal emulator), but they are actually separate. See ...

Kind of. Bubble and capture are the two event propagation modes. By setting useCapture to true, we are effectively disabling bubbling for this event being fired from child elements and setting the window object as the handler for this event type explicitly. - Richard Pressler Apr 9 '16 at 4:48 | show 5 more comments

Sue, It looks to me very much like some other object is defined, and available to your database, with a name of DATE. If it were being recognised as the Date() function (from the VBA library) then only the D would be capitalised. Do you know how to use the Object Browser (See Debugging in VBA) to find what is declared where? As Linq intimated earlier, your code has no obvious bug in it.
