### **Food Webs and Food Chains Worksheet**

4. The 1st organism in a food chain must always be what type of organism?

### **Food Chains and Webs---"What's for dinner?" Questions and ...**

Energy transfer efficiency limits food chain lengths. As a rule of thumb, only about 10% of the energy that's stored as biomass in one trophic level—per unit time—ends up stored as biomass in the next trophic level—per the same unit time. This 10% rule of energy transfer is a good thing to

commit to memory.

**Food chains & food webs (article) | Ecology | Khan Academy**

Trophic level. The trophic level of an organism is the number of steps it is from the start of the chain. A food chain starts at trophic level 1 with primary producers such as plants, can move to herbivores at level 2, predators at level 3 and typically finish with carnivores or apex predators at level 4 or 5.

**Trophic level - Wikipedia**

Food chain: Transfer of food from one trophic level to another through series of organisms with repeated eating and being eaten is called a food chain. Food chain is the linear unidirectional flow of energy and materials through the food from one trophic level to the other. In a food chain, each stage represents a trophic level.

**Food chain, trophic levels and flow of energy in ecosystem ...**

Best Answer: Since "troph" refers to eating, the trophic level in a food web indicates "from where" an organism gets its energy ("what" it eats). The "lowest" trophic level are the producers; then come the consumers (herbivores, carnivores, omnivores, etc.). Decomposers are found at all trophic levels.
