Highlights We conducted a survey and proposed perspectives on taxonomies regarding issues of power system security. Definitions and examples of various threats to power systems were given. A framework for classification of origins of threats to power system security was proposed. Based on the proposed framework, statistical analysis was performed to reveal the trend of threats.

In cryptography, power analysis is a form of side channel attack in which the attacker studies the power consumption of a cryptographic hardware device (such as a smart card, tamper-resistant "black box", or integrated circuit). The attack can non-invasively extract cryptographic keys and other secret information from the device. Simple power analysis (SPA) involves visually interpreting power ...
