Water hammer is part of the larger subject of transient flow or surge analysis. It is the special case when there is a sudden change in flow velocity. Usually this occurs when a valve closes quickly.

Pressure (symbol: p or P) is the force applied perpendicular to the surface of an object per unit area over which that force is distributed. Gauge pressure (also spelled gage pressure) is the pressure relative to the ambient pressure.. Various units are used to express pressure. Some of these derive from a unit of force divided by a unit of area; the SI unit of pressure, the pascal (Pa), for ...

The viscosity of a fluid is a measure of its resistance to deformation at a given rate. For liquids, it corresponds to the informal concept of "thickness": for example, syrup has a higher viscosity than water. Viscosity can be conceptualized as quantifying the frictional force that arises between adjacent layers of fluid that are in relative motion. For instance, when a fluid is forced through ...

A response to Don Scott's "The Electric Sun" webpage, this webpage of mine is as yet incomplete, and therefore a "work in progress". It is not my intention, at least for now, to address the issues raised, and alleged to be in favor of the electric-sun hypothesis.

Even though, polymeric membranes provide good separation properties, even at high-pressures, at the same time they present discouraging results at special working conditions because of their inherent disadvantages related to the poor temperature resistance, the corrosion in chemicals and the swelling phenomena. Swelling is the process of dissolution of a polymer in a defined solvent, liquid ...
