Notes: So far, all the "tools" students have learned about reactance, impedance, Ohm's Law, and such in AC circuits assume sinusoidal waveforms. Being able to equate any non-sinusoidal waveform to a series of sinusoidal waveforms allows us to apply these "sinusoidal-only" tools to any waveform, theoretically.. An important caveat of Fourier's theorem is that the waveform in question ...

Summarizing what we have learned so far. Our 2 nC charge, no matter where it is placed in the electric field, will always experience a force of 4.0×10^{-7} newtons towards the bottom, negative plate. That constant force would result in the charge being uniformly accelerated towards the bottom plate.
