Charles S. Peirce randomly assigned volunteers to a blinded, repeated-measures design to evaluate their ability to discriminate weights. Peirce's experiment inspired other researchers in psychology and education, which developed a research tradition of randomized experiments in laboratories and specialized textbooks in the 1800s.

Most of the studies comparing single-sex education with coeducation focus on grades and test scores as the parameters of interest. Before we look at those studies, we want you to consider another variable altogether: namely, breadth of educational opportunity. Girls in all-girls schools are more likely to study subjects such as advanced math, computer science, and physics.
