Time. A temporal dimension is a dimension of time. Time is often referred to as the "fourth dimension" for this reason, but that is not to imply that it is a spatial dimension. A temporal dimension is one way to measure physical change. It is perceived differently from the three spatial dimensions in that there is only one of it, and that we cannot move freely in time but subjectively move in ...

In Unit 2 we studied the use of Newton's second law and free-body diagrams to determine the net force and acceleration of objects. In that unit, the forces acting upon objects were always directed in one dimension. There may have been both horizontal and vertical forces acting upon objects; yet there were never individual forces that were directed both horizontally and vertically.

It is virtually impossible for man in what the Apostle Paul portrayed as his organic "natural" condition of mind (see What Difference Does It Make), to comprehend the enigma of a paradoxical reality. Yet, he finds himself immersed in a paradoxical world -- often eating the forbidden fruit of the Tree of Duality by embracing one paradoxical truth, while rejecting its opposite that is equally true.
