In theoretical physics and applied mathematics, a field equation is a partial differential equation which determines the dynamics of a physical field, specifically the time evolution and spatial distribution of the field. The solutions to the equation are mathematical functions which correspond directly to the field, as functions of time and space. Since the field equation is a partial ...

The Euler-Lagrange differential equation is implemented as `EulerEquations[f, u[x], x]` in the Wolfram Language package `VariationalMethods``. In many physical problems, (the partial derivative of with respect to) turns out to be 0, in which case a manipulation of the Euler-Lagrange differential equation reduces to the greatly simplified and partially integrated form known as the Beltrami identity,

(2007-07-19) On the "Statistics" of Elementary Particles A direct consequence of quantum logic: Pauli's Exclusion Principle In very general terms, you may call "particle" some part of a quantum system. Swapping (or switching) a pair of particles is making one particle take the place of the other and vice versa, while leaving everything else unchanged.
