What is science? Science is the concerted human effort to understand, or to understand better, the history of the natural world and how the natural world works, with observable physical evidence as the basis of that understanding 1.It is done through observation of natural phenomena, and/or through experimentation that tries to simulate natural processes under controlled conditions.

But there's a problem with both of these theories. Plants and microorganisms, otherwise known as "things without brains," have dormant states that are very similar to sleep, which kind of puts doubt on the whole "sleep is good for the brain" theory. Then there's the fact that scientists have found certain humans who can go without sleep with no ill effects.

8 Simple Questions You Won't Believe Science Can't Answer

Editor's Note: We asked several scientists from various fields what they thought were the greatest mysteries today, and then we added a few that were on our minds, too. This article is one of 15 ...

Like many of you did, I showed up last Saturday at my local 2018 Women's March Rally. I had a bad cold last week, so I didn't have the energy to make a sign, but I made sure to wear my "Thelma and Louise Finishing School Graduate" shirt, and I met up with some faculty friends who had brought "A Woman's Place is in the Revolution" signs.
