There are five ways to find if two triangles are congruent: SSS, SAS, ASA, AAS and HL. 1. SSS (side, side, side). SSS stands for "side, side, side" and means that we have two triangles with all three sides equal.. For example:

How To Find if Triangles are Congruent - Math Is Fun

We won't prove them. We will start with these assumptions, and then we're just going to build up from there. And one of the core ones that we'll see in geometry is the axiom, or the postulate, that if all the sides are congruent, or if the lengths of all the sides of the triangle are congruent, then we are dealing with congruent triangles.

IXL - SSS, SAS, ASA, and AAS Theorems (Geometry practice)

In geometry, two figures or objects are congruent if they have the same shape and size, or if one has the same shape and size as the mirror image of the other.. More formally, two sets of points are called congruent if, and only if, one can be transformed into the other by an isometry, i.e., a combination of rigid motions, namely a translation, a rotation, and a reflection.
