In mathematics, economics, and computer science, the stable marriage problem (also stable matching problem or SMP) is the problem of finding a stable matching between two equally sized sets of elements given an ordering of preferences for each element. A matching is a mapping from the elements of one set to the elements of the other set. A matching is not stable if:

Solutions and Mixtures Before we dive into solutions, let's separate solutions from other types of mixtures. Solutions are groups of molecules that are mixed and evenly distributed in a system. Scientists say that solutions are homogenous systems. Everything in a solution is evenly spread out and thoroughly mixed.

How issue trees / solution trees are for actively looking for ways to correct your problem. With how trees, you look for all the potential solutions to your problem. As a general rule, you want to know the why before you get to the how, so if you don't know the root cause(s) of your problem, find these first. Issue trees progress further into details until elements are sufficiently explicit.
