Answer: D. ovary → fallopian tube → uterus → vagina. Explanation: The egg/ovum develops in ovary. Ovary is a specialized organ in female reproductive system which is meant for the production and development of ovum. The ovum lies within the follicle present inside ovary. The follicles mature from primordial follicle to primary follicle which then matures into secondary follicle, secondary ...

As with most tetrapods, canine copulation involves the male mounting the female from behind, a position that is referred to as "doggy style" but does not have a specifically known origin. When a male canine is interested in mounting a female, he will sniff the female's vulva. If the female is unreceptive, she may sit, lie down, snap, retreat, or otherwise be uncooperative.

1. Introduction. The investigation and management of abnormal uterine bleeding (AUB) among nongravid women of reproductive age has been hampered both by confusing and inconsistently applied nomenclature and by the lack of standardized methods for investigation and categorization of the various potential etiologies. These deficiencies hamper the ability of investigators to study homogenous ...

Warning: I have to begin this answer by warning against applying human moral standards to animals, because it's very easy to do in this situation. But mallards aren't thinking about right and wrong when they engage in behaviors. They're acting in the ways that have proven reproductively successful.

### **Why are these mallard males beating up this female? | Ask ...**

Why a Scientific Format? The scientific format may seem confusing for the beginning science writer due to its rigid structure which is so different from writing in the humanities. One reason for using this format is that it is a means of efficiently communicating scientific findings to the broad community of scientists in a uniform manner.
