Atmospheric dispersion modeling is the mathematical simulation of how air pollutants disperse in the ambient atmosphere. It is performed with computer programs that include algorithms to solve the mathematical equations that govern the pollutant dispersion. The dispersion models are used to estimate the downwind ambient concentration of air pollutants or toxins emitted from sources such as ...

Programming should begin with a clear definition of the activities to be performed and the people who will use the space and surroundings. Accounting for functional and psychological needs is a primary purpose of the planning process that defines an owner's functional and physical requirements for each spatial element in a building or facility. This process seeks to:

Abstract. XML Schema: Datatypes is part 2 of the specification of the XML Schema language. It defines facilities for defining datatypes to be used in XML Schemas as well as other XML specifications. The datatype language, which is itself represented in XML 1.0, provides a superset of the capabilities found in XML 1.0 document type definitions (DTDs) for specifying datatypes on elements and ...
