Pearson - The Biology Place

A new study finds that the choice to eat or omit a meal before an early workout could affect our relationship to food for the rest of the day.

Well - The New York Times

Many causes of autism have been proposed, but understanding of the theory of causation of autism and the other autism spectrum disorders (ASD) is incomplete. Research indicates that genetic factors predominate. The heritability of autism, however, is complex, and it is typically unclear which genes are responsible. In rare cases, autism is strongly associated with agents that cause birth defects.

Causes of autism - Wikipedia

Evolutionary biology is the subfield of biology that studies the evolutionary processes that produced the diversity of life on Earth, starting from a single common ancestor. These processes include natural selection, common descent, and speciation.. The discipline emerged through what Julian Huxley called the modern synthesis (of the 1930s) of understanding from several previously unrelated ...

Evolutionary biology - Wikipedia

PREFACE. In the fall of 1994, the publication of Herrnstein and Murray's book The Bell Curve sparked a new round of debate about the meaning of intelligence test scores and the nature of intelligence. The debate was characterized by strong assertions as well as by strong feelings.

Intelligence: Knowns and Unknowns - Michna

Where microaggressions really come from: A sociological account. Posted by Jonathan Haidt in Civility, Social trends. I just read the most extraordinary paper by two sociologists — Bradley Campbell and Jason Manning — explaining why concerns about microaggressions have erupted on many American college campuses in just the past few years. In brief: We're beginning a second transition of ...

List of the largest us colleges by land mass - answers.com

he story of Haeckel's embryos is different in an important way from that of the other chapters in Jonathan Wells' book. As the other authors show, Wells has distorted ideas that are fundamentally true in order to make his point: all his rhetoric to the contrary, Archaeopteryx is a transitional fossil, peppered moths and Darwin's finches do tell us significant things about evolution, four-winged ...

The cell cycle is often described as a circle of cell life and division, but I think that can be a bit confusing for some people, so let's try to remember that by "cycle" we mean it happens again and again. A cell divides into two "daughter cells" and both of these cells live, "eat", grow, copy their genetic material and divide again producing two more daughter cells.

The cloning of Dolly, cell biology and developmental biology.

Obesity is a condition in which a person has an unhealthy amount and/or distribution of body fat. To measure obesity, researchers commonly use a scale known as the body mass index (BMI). BMI is calculated by dividing a person's weight (in kilograms) by their height (in meters) squared (commonly expressed as kg/m²). BMI provides a more accurate measure of obesity than weight alone, and for ...
