Most steroid users are not athletes. In the United States, between 1 million and 3 million people (1% of the population) are thought to have used AAS. Studies in the United States have shown that AAS users tend to be mostly middle-class heterosexual men with a median age of about 25 who are noncompetitive bodybuilders and non-athletes and use the drugs for cosmetic purposes. "

Hemostatic factors associated with thrombosis have also been shown to improve with exercise 27, 28. Specifically, platelet aggregation and adhesiveness have been shown to decrease with exercise training; however, in the setting of deconditioning, these positive effects revert to pre-training levels. Concentrations of plasminogen activator inhibitor 1 and tissue plasminogen activator antigen are ...

x We report the case of a 56 year-old female with a six-year history of severe epigastric pain following chest compressions for cardiac arrest. A comprehensive gastrointestinal workup was negative. However, an abdominal CT scan demonstrated an elongated xiphoid process. After a xiphoid trigger point injection, she experienced pain relief lasting four days, and thus her symptoms were attributed ...
