However, microprocessors are not the only power dissipation components in a typical server. An individual hard disk can dissipate powers as high as 12 W and up to 20–30% of the total power supply can be consumed by mass storage devices. Memory components also draw power and a DIMM's power consumption in standby mode is approximately 3 W while the power consumption in full load mode increases ...

Delamination of laminated composites is one of the main causes of damage experienced in composite structures. Various trans laminar reinforcement techniques such as stitching, pinning, tufting, weaving and braiding are commonly employed to improve the delamination resistance and provide a fail-safe bonded or co-cured structure.
