So I'm taking physics 101 right now, and I'm struggling because my teacher honestly...spends 70% of the lecture just conversing with us and the other 30% working through examples in the book. And I'd be okay with that, but not ONE formula he uses in class is the same as the formulas we're given in the book. \_\_\_\_\_. I'm not trying to place blame on him, because I think he's a really great guy ...

You are on the roof of the physics building, 46.0m above the ground . Your physics professor, who is 1.80m tall, is walking alongside the building at a constant speed of 1.20m/s The question is; If you wish to drop an egg on your professor's head, how far from the building should the professor be when you release the egg? Assume that the egg is in free fall.

Suppose that a quadratic fit to a position plot (see section 3.4.3.1) yields the following fit result,  $y = 4.97x^2 + 1.53x + 0.0503$ . From this fit result: Determine the acceleration due to gravity of the particle.

Free Falling Body - Worked Physics Problem. Search. Search ... expect. More importantly, it allows you to answer the fundamental question that you should ask yourself when you get done with a physics problem: Does my solution make sense? The acceleration due to gravity is  $9.8 \text{ m/s}^2$ . This means that after falling for 1 second, an object will be ...

In this unit on freely-falling bodies, we will examine two forces: weight and normals. We have already covered weight (the force of gravitational attraction between the mass and the mass of the planet). A normal force is a force supplied by a supporting surface. This force can be supplied by someone's hand holding a projectile, a table and the ...

Earlier in Lesson 6, four kinematic equations were introduced and discussed. A useful problem-solving strategy was presented for use with these equations and two examples were given that illustrated the use of the strategy. Then, the application of the kinematic equations and the problem-solving strategy to free-fall motion was discussed and illustrated.
