by: Don W. Green, Robert H. Perry Abstract: The definitive reference for more than half a century,—updated for the first time in more than a decade. Since 1934, Perry's Chemical Engineer's Handbook has delivered unrivaled, state-of-the-art coverage of all aspects of chemical engineering—from the fundamentals to details on computer applications and control.

In chemical thermodynamics, the fugacity of a real gas is an effective partial pressure which replaces the mechanical partial pressure in an accurate computation of the chemical equilibrium constant. It is equal to the pressure of an ideal gas which has the same temperature and molar Gibbs free energy as the real gas.. Fugacities are determined experimentally or estimated from various models ...

Theoretical background. The acid dissociation constant for an acid is a direct consequence of the underlying thermodynamics of the dissociation reaction; the pK_a value is directly proportional to the standard Gibbs free energy change for the reaction. The value of the pK_a changes with temperature and can be understood qualitatively based on Le Châtelier's principle: when the reaction is ...
