Game theory is the study of mathematical models of strategic interaction between rational decision-makers. It has applications in all fields of social science, as well as in logic and computer science. Originally, it addressed zero-sum games, in which one person's gains result in losses for the other participants. Today, game theory applies to a wide range of behavioral relations, and is now an ...

Evolutionary game theory (EGT) is the application of game theory to evolving populations in biology. It defines a framework of contests, strategies, and analytics into which Darwinian competition can be modelled. It originated in 1973 with John Maynard Smith and George R. Price's formalisation of contests, analysed as strategies, and the mathematical criteria that can be used to predict the ...

Box and Cox (1964) developed the transformation. Estimation of any Box-Cox parameters is by maximum likelihood. Box and Cox (1964) offered an example in which the data had the form of survival times but the underlying biological structure was of hazard rates, and the transformation identified this.

3.2. Decision variables, states and utility functions. Our game-theoretic setting is inspired from the electrical engineering models (Farivar, Low, 2013, Papavasiliou, 2017), that we reformulate in the framework introduced by Başar and Olsder (1999). Adopting system theory terminology, we differentiate the variables into two categories: we call x the (full) state of the game, while u TSO, (u ...
