Exponential smoothing is a rule of thumb technique for smoothing time series data using the exponential window function. Whereas in the simple moving average the past observations are weighted equally, exponential functions are used to assign exponentially decreasing weights over time. It is an easily learned and easily applied procedure for making some determination based on prior assumptions ...

In this section we will introduce logarithm functions. We give the basic properties and graphs of logarithm functions. In addition, we discuss how to evaluate some basic logarithms including the use of the change of base formula. We will also discuss the common logarithm, $\log(x)$, and the natural logarithm, $\ln(x)$.

In physics, a plane wave is a special case of wave or field: a physical quantity whose value, at any moment, is constant over any plane that is perpendicular to a fixed direction in space.. For any position \vec{r} in space and any time t , the value of such a field can be written as $(\vec{r}, t) = (\vec{r} \cdot \vec{r}_0, t)$, where \vec{r}_0 is a unit-length vector, and $(, t)$ is a function that gives the field's value as from ...

We've seen this kind of thing before - the exponential like function in contagion and deaths is largely theoretical and seems to dissipate as humans start "doing something" about the epidemic - swine flu and the bird flu were supposed to do the same, I recall.

The Lambert W-function, also called the omega function, is the inverse function of $f(W) = We^W$. (1) The plot above shows the function along the real axis. The principal value of the Lambert W-

function is implemented in the Wolfram Language as $\text{ProductLog}[z]$. Different branches of the function are available in the Wolfram Language as $\text{ProductLog}[k, z]$, where k is any integer and $k=0$ corresponds to ...

The numbers get bigger and converge around 2.718. Hey... wait a minute... that looks like e ! Yowza. In geeky math terms, e is defined to be that rate of growth if we continually compound 100% return on smaller and smaller time periods:. This limit appears to converge, and there are proofs to that effect. But as you can see, as we take finer time periods the total return stays around 2.718.
