An electric motor is an electrical machine that converts electrical energy into mechanical energy. Most electric motors operate through the interaction between the motor's magnetic field and electric current in a wire winding to generate force in the form of rotation of a shaft. Electric motors can be powered by direct current (DC) sources, such as from batteries, motor vehicles or rectifiers ...

Electric / electrical systems use electricity to transmit and manipulate power.. Electronic systems use electricity to transmit and manipulate information.. E.g. an electric battery stores power that can be used to light an electric light bulb. An electronic light sensor produces a voltage that depends on the amount of light falling upon it, which might be used as part of a system that ...

Energy storage is the capture of energy produced at one time for use at a later time. A device that stores energy is generally called an accumulator or battery. Energy comes in multiple forms including radiation, chemical, gravitational potential, electrical potential, electricity, elevated temperature, latent heat and kinetic. Energy storage involves converting energy from forms that are ...
