The eight queens puzzle is the problem of placing eight chess queens on an 8×8 chessboard so that no two queens threaten each other; thus, a solution requires that no two queens share the same row, column, or diagonal. The eight queens puzzle is an example of the more general n queens problem of placing n non-attacking queens on an n×n chessboard, for which solutions exist for all natural ...

In this section we solve separable first order differential equations, i.e. differential equations in the form $N(y) y' = M(x)$. We will give a derivation of the solution process to this type of differential equation. We'll also start looking at finding the interval of validity for the solution to a differential equation.
