Thermal decomposition of $\text{Ca}(\text{OH})_2$ under atmospheric water vapor exhibits special features, including an induction period (IP) and a subsequent sigmoidal mass-loss behavior under isothermal conditions.

Nobuyoshi Koga - ResearchGate

Aha, you cracked it... Not. What you don't get is that as the feedback becomes greater the stability is lower. That is the system starts to oscillate, there is no evidence of any oscillation in heating, Conveniently, the climate scientists use a scalar model which ignores time lags and presumes you can superpose all the feedback.
