Virtual Labs Created by Glencoe. Many of these labs allow students to test multiple variables. Caution: the journal and data entry sections of the simulations do not work, so you probably will want to arrange for students to write these on their own pages.

Virtual Labs Created by Glencoe - The Biology Corner

A food chain often ends with a predator or an omnivore like humans. Each plant and animals in the chain is important. Many food chains make up a food web. Predators at the end of the food chain die and are eaten by decomposers, which provide soil for producers. Whether it is a food chain or food web, plants and animals need each other.

WebLessons: Food Chains and Food Webs

Lessons > Food Web > Challenge. Now that you have a sense for the interrelationships between the trophic levels, see how big you can make your food web and still have all of the species you add survive through the end of the simulation run.

The Habitable Planet - Food Web - Challenge - Learner

Lab: Food Chains and Food Webs Background: What happens to the energy in an ecosystem when one organism eats another? That energy moves along a one-way path. Energy flows through an ecosystem in one direction, from the sun or inorganic compounds in autotrophs (producers) and then to various heterotrophs (consumers). The
