### **section 13 2 forces and pressure in fluids answer key ...**

force acts in the direction opposite to the force of gravity, so it makes an object feel lighter. Any object submerged in a fluid displaces, or takes the place of, a volume of fluid equal to its own volume. For an object floating on the surface, the volume of fluid displaced is equal to the volume of the part of the floating object that is submerged.

when force is applied to a confined fluid, an increase in pressure is transmitted equally to all parts of the fluid hydraulic systems this multiplies a force by applying a force to a small area, the increase in pressure is transmitted equally to another part of the fluid, which has a bigger surface area

In fluids, particles are constantly moving in all directions. They are constantly colliding with each other and with any surface they meet. 10. All the forces exerted by the individual particles in a fluid add together to make up the pressure exerted by the fluid. 11. area. 12. atmospheric pressure. 13.

Forces in Fluids 6 Students will know that the buoyant force on an object in a fluid is equal to the weight of the fluid that the object displaces. Students will know that floating objects are subject to balanced forces (weight and buoyant force) and that sinking objects are subject to unbalanced forces (weight is larger than buoyant force).
