Electric Potential and Electric Potential Energy We learned that in work power energy chapter, objects have potential energy because of their positions. In this case charge in an electric field has also potential energy because of its positions. Since there is a force on the charge and it does work against to this force we can say that it must have energy for doing work.

Definition. One volt is defined as the difference in electric potential between two points of a conducting wire when an electric current of one ampere dissipates one watt of power between those points. It is also equal to the potential difference between two parallel, infinite planes spaced 1 meter apart that create an electric field of 1 newton per coulomb. ...

Electric and magnetic fields (EMFs) are invisible areas of energy, often referred to as radiation, that are associated with the use of electrical power and various forms of natural and man-made lighting. Learn the difference between Ionizing and Non-ionizing radiation, the Electromagnetic Spectrum, and how harmful EMFs are to your health

Electric & Magnetic Fields

A positive charge means that the object has lost electrons and is no longer electrically neutral. Each electron lost gives the particle a charge of $+1.6 \times 10^{-19}$ coulombs. Positive, or vitreous, charges are classically created by rubbing a glass rod with silk.

Elastic Potential Energy. The second form of potential energy that we will discuss is elastic potential energy. Elastic potential energy is the energy stored in elastic materials as the result of their stretching or compressing. Elastic potential energy can be stored in rubber bands, bungee chords, trampolines, springs, an arrow drawn into a bow, etc.
