In the 1980s, Mayo Clinic researchers measured digestion time in 21 healthy people. Total transit time, from eating to elimination in stool, averaged 53 hours (although that figure is a little overstated, because the markers used by the researchers passed more slowly through the stomach than actual food).

The regular approach to chemicals in food is to perform a specific risk assessment (RA) for each individual chemical, see Fig. 1. However, determining the risk character is convoluted when there is a shortage of available data on migrating compounds (Skjevrak et al., 2005). For the commonly investigated Intentionally Added Substances (IAS), there is often data available from prior research or ...
