@LightnessRacesinOrbit I'm not getting your point. If you remove a global variable, you remove the complicating factor in that now, arbitrary functions can no longer alter program state, at various points in execution--thus altering execution in a way that is otherwise imperceptible to other functions relying on that variable.You no longer have to keep track of, "Did f2() change state so now ...

## **python - Using global variables in a function - Stack Overflow**

@HenkHolterman: I'm not agreed. Sometimes global variables are useful. For example imagine you have several modules, let's say several dlls which communicate and each one has an instance on runtime, you would have some kind of static wrappers to be used in communication when one dll has a request from the other.
