6 Chapter 1—Introduction to Fluid Mechanics by deformation. In fluid mechanics, pressure is usually the most important type of compressive stress, and will shortly be discussed in more detail. 2. The second type of stress, shown in Fig. 1.3(b), acts tangentially to the surface; it is called a shear stress τ , and equals F/A , where F is the tangential force and A is the area on which it acts.

Jim, Thanks for your question! I work very little with flows that have negligible inertial forces, such as a creeping flow or stokes flow; however, it does make me think of a coral sperm (very relevant to my research) trying to make its way through a seemingly incredibly viscous fluid.

In physics, the Navier-Stokes equations ($\text{ˈnæv}^{\text{ˈ}j\text{ˈeɪs}^{\text{t}^{\text{ʊ}^{\text{k}^{\text{s}}}}}$), named after Claude-Louis Navier and George Gabriel Stokes, describe the motion of viscous fluid substances.. These balance equations arise from applying Isaac Newton's second law to fluid motion, together with the assumption that the stress in the fluid is the sum of a diffusing viscous term (proportional to the ...

Aerodynamics, from Greek ἀήρ aer (air) + δυναμική (dynamics), is the study of motion of air, particularly as interaction with a solid object, such as an airplane wing. It is a sub-field of fluid dynamics and gas dynamics, and many aspects of aerodynamics theory are common to these fields. The term aerodynamics is often used synonymously with gas dynamics, the difference being that ...
