Uses hooks and suckers on its head to dig into the lining of an organism's digestive tract
Considered Parasitic Blocks the host's intestines Steals valuable food and water Can grow 10-12 meters in length Life Cycle of A Tapeworm Flatworms: Planarians Planarians Scavengers A feeding tube releases digestive juices to break down food.

Slide 1

Flatworms, the first animal to hunt, are found in the ocean, freshwater, on land, and even inside other animals. The ancient flatworms were the first animals to develop a central nervous system and a head with a brain. The head had eyes—the first in the animal world. The flatworm body is bilateral—the first body plan with that design.

Phylum Platyhelminthes Flatworms The Acoelomates The acoelomates are animals that lack a coelom. Acoelomates lack a body cavity, and instead the space between the body wall and the digestive tract is filled with muscle fibers and loose tissue called parenchyma. These animals possess

Phylum Platyhelminthes - Cape Fear Community College

Because they do not have internal body cavities, for over a century Platyhelminthes were regarded as a primitive stage in the evolution of bilaterians (animals with bilateral symmetry and hence with distinct front and rear ends). However, analyses since the mid-1980s have separated out one subgroup, the Acoelomorpha, as basal bilaterians, in other words closer to the original bilaterians than ...
