Ventilation and Perfusion. Two important aspects of gas exchange in the lung are ventilation and perfusion. Ventilation is the movement of air into and out of the lungs, and perfusion is the flow of blood in the pulmonary capillaries. For gas exchange to be efficient, the volumes involved in ventilation and perfusion should be compatible.

**22.4 Gas Exchange - Anatomy and Physiology**

Unit aim. Examines normal physiological function at the cellular level, endocrine system and nervous system physiology, and homeostatic control pathways.
