Best Answer: The male's reproductive system consists of three organs. They are testes (where sperm is produced), the urine ducts (they carry urine and sperm to the cloaca), and the cloaca (where sperm and urine exits the body). The female's reproductive system has two organs . They are the ovaries ...

### **What is a frogs reproductive structure/system? | Yahoo Answers**

Best Answer: The gastric brooding frog is indeed a remarkable example of an unusual reproductive strategy. We do not know how it evolved. Unfortunately, this frog has no closely related living species, which would usually shed some light on how its reproductive strategy could have evolved, because it is simply next to impossible for the evolution of a new reproductive system to have occurred ...

### **How do evolutionists explain the gastric brooding frog's ...**

Frog Dissection. The kidneys are organs that excrete urine. Connected to each kidney is a ureter, a tube through which urine passes into the urinary bladder, a sac that stores urine until it passes out of the body through the cloaca. The organs of the male reproductive system are the testes, sperm ducts, and cloaca.

### **Frog Dissection - BIOLOGY JUNCTION**

The Urogenital System. The urogenital system of the frog consists of organs that function in reproduction and excretion. You will need to locate all of the structures regardless of whether your

frog is a male or a female. You will need to look at other groups' frogs in order to complete the dissection.
