Fluid mechanics is the study of the flow of fluids, and is sometimes known as hydrodynamics. Properties normally ascribed to fluids include density ρ , compressibility β (sometimes specified in terms of the so-called second viscosity coefficient λ), and dynamic viscosity η . In general, the motion of fluids is extremely complicated, including highly nonlinear phenomena like ...

Stress is the force per unit area on a body that tends to cause it to change shape.. Stress is a measure of the internal forces in a body between its particles. These internal forces are a reaction to the external forces applied on the body that cause it to separate, compress or slide. External forces are either surface forces or body forces.Stress is the average force per unit area that a ...

Newly corrected, this highly acclaimed text is suitable for advanced physics courses. The authors present a very accessible macroscopic view of classical electromagnetics that emphasizes integrating electromagnetic theory with physical optics. The survey follows the historical development of physics, culminating in the use of four-vector relativity to fully integrate electricity with magnetism.

A non-Newtonian fluid is a fluid that does not follow Newton's law of viscosity, i.e. constant viscosity independent of stress.In non-Newtonian fluids, viscosity can change when under force to either more liquid or more solid. Ketchup, for example, becomes runnier when shaken and is thus a non-Newtonian fluid.Many salt solutions and molten polymers are non-Newtonian fluids, as are many ...
