The Echinoderms Answer Key - HelpTeaching.com

8. What characteristic of echinoderm embryos makes this phylum evolutionarily resemble chordates? Echinoderms and chordates are deuterostomes, meaning that, during their embryonic development, the blastopore turns into their anus. All other animals with complete digestive system are protostomes, meaning that their blastopore turns into their mouth.

echinoderm review worksheet - brainbeau.com

Echinoderms have an internal skeleton made of bony plates (ossicles) of calcium carbonate. They deposit this material after extracting dissolved calcium and carbonate (bicarbonate) ions from sea water. In some species, such as the sea urchin, plates of the skeleton are locked together to form a rigid structure.
