They are absolutely different. Inheritance is an "is-a" relationship. Composition is a "has-a".. You do composition by having an instance of another class C as a field of your class, instead of extending C. A good example where composition would've been a lot better than inheritance is `java.util.Stack`, which currently extends `java.util.Vector`. This is now considered a blunder.

### **java - Difference between Inheritance and Composition ...**

Prefer composition over inheritance as it is more malleable / easy to modify later, but do not use a compose-always approach. With composition, it's easy to change behavior on the fly with Dependency Injection / Setters.
