## 11-1 Lines that Intersect Circles

In the case of two non-parallel lines, the intersection will always be on the lines somewhere. But in the case of line segments or rays which have a limited length, they might not actually intersect. In Fig 1 we see two line segments that do not overlap and so have no point of intersection.

## Intersecting straight lines. (Coordinate Geometry) - Math ...

Lines & Line Segments. We know that, generally speaking, a line is a straight, 1-dimensional figure between two points. In geometry, though, there is a distinction between line segments and lines. A line segment is what you probably think of when you think of a line. It's straight and stretches between two endpoints: A line, however,...

### **1 EXPLORATION: Lines and Line Segments That Intersect Circles**

A secant is a line that intersects a circle in two points. A tangent is a line in the plane of a circle that intersects the circle in exactly one point, the point of tangency.  $\overline{AB}$  and the tangent segment  $\overline{AB}$  are also called tangents. In a plane, two circles can intersect in two points, one point, or no points.
