Quiz & Worksheet - Internal & External Forces that Shape ...

Iceberg floats with its top above the water, but most of it is under the surface of the water. It floats this way because ice is less dense than water and because the mass of the ice equals the mass of the water it displaces. Continents rise above the seafloor because continental crust is less dense than Earth's mantle.

Chapter 8 Lesson 1- Forces That Shape Earth Flashcards ...

A. Law of gravitation—any two masses exert an attractive force on each other. Gravity is one of the four basic forces that also include the electromagnetic force, the strong nuclear force and the weak nuclear force. Gravity is a long range force that gives the universe its structure.
