The harmonic mean is a way to calculate the mean, or average, of a set of numbers. Using the harmonic mean is most appropriate when the set of numbers contains outliers that might skew the result. Most people are familiar with calculating the arithmetic mean, in which the sum of values is divided by the number of values.

Average: It is calculated for those set of values which are more or less same, i.e. the difference between them is very less. eg. In an experiment, we get 21.82, 22.06, 22.23 as values of some quantity, so average is their total sum divided by the...

Recall that geometric figures are collections of points; they are subsets of space. For example, this fancy letter ' \mathcal{G} ' is a geometric figure (although not one that is commonly discussed)! Geometric figures are mathematical expressions—they are mathematical objects of interest. As with any new expression, you need to develop tools for working with them—for asking and ...
