Since the Lewis electron dot diagrams are based on the number of valence electrons, it would hold true that the elements in the same group would have the same electron dot diagram. In other words, if every element in Group 1A has 1 valence electron, then every Lewis electron dot diagram would have one single dot.

Lewis structures, also known as Lewis dot diagrams, Lewis dot formulas, Lewis dot structures, electron dot structures, or Lewis electron dot structures (LEDS), are diagrams that show the bonding between atoms of a molecule and the lone pairs of electrons that may exist in the molecule. A Lewis structure can be drawn for any covalently bonded molecule, as well as coordination compounds.
